TITLE : ACRYLIC COVERING MATERIAL

ABSTRACT : PURPOSE: The titled novel material useful for metal coating, providing a film of coating having extremely improved adhesivity to the surface of metal, obtained by copolymerizing a specific phosphoric ester monomer with a copolymerizable monomer in a specific ratio.

CONSTITUTION: A mixture of (A) 0.1~10 wt.% monomer selected from phosphoric ester monomers shown by the formula I and formula II [$R_1 \sim R_3$ are group shown by the formula III (R_4 is H, or methyl; R_5 is 2~4C alkylene; n is 0~3 integer)] and (B) 99.9~90 wt.% another copolymerizable monomer is copolymerized preferably by solution polymerization method, to give the aimed material. A mixture of the monomers shown by the formula I/formula II in a molar ratio of 0~60/100~40 is preferable as the component A. Preferably 5~40 wt.% OH-containing monomer such as methyl acrylate, etc., is used in the component B.
